Project Vision: 🌱 GreenStep

Module: Principles of Software Engineering (ITS 610204/ITS 64604)

Goal: SDG 13: Climate Action

Date: 26 February 2026

1. The Big Idea

GreenStep is a mobile app prototype built for the Taylor's University community to make eco-friendly living a daily habit. While many apps track general tasks, GreenStep focuses specifically on SDG 13 (Climate Action). It uses a points-based system to help students and staff see the real-world impact of their small, daily choices.

2. Why It Matters

Many people want to help the planet but feel their small actions—like switching off a light—don't really matter. Without a way to see their progress, it's easy to lose motivation or forget to make sustainable choices. On campus, there currently isn't a localized tool to reward students for being green.

3. Our Solution

GreenStep turns sustainability into a rewarding routine. By logging daily habits, users can watch their "Carbon Saved" metrics grow, creating a positive loop that keeps them engaged.

Our Goals:

Drive Climate Action: Lower the campus carbon footprint by encouraging greener habits.

Make it Fun: Use gamification and points to make environmentalism exciting for young adults.

Spread Knowledge: Provide easy-to-read facts and tips about global warming.

4. Who Is It For?

Main Users: Taylor’s University students.

Supporting Users: University lecturers and staff members.

5. Key Features (The Prototype)

To prove the concept works within our Agile timeline, the app will include:

Easy Login: Sign in quickly using Taylor's Student or Staff IDs.

Impact Dashboard: A home screen showing your total "Eco-Points" and "Carbon Saved".

Quick Action Logger: A simple interface to log habits like "used a reusable cup" or "took the BRT" with one tap.

Learning Hub: A page full of climate facts and practical green living tips.

6. How We Define Success

We will know the project is successful if:

It’s Fast: A user can log an action in 3 clicks or less.

It’s Organized: Our technical diagrams (UML) and Agile plans match the working app. It’s Motivating: Feedback shows that the points system actually encourages users to stay green.
